

FOREMANS RECYCLED MODULAR BUILDINGS FOR ONE OF UK'S FIRST PRIMARY ACADEMIES AND FREE SCHOOLS

One of the UK's first primary schools to achieve Academy status has used a highly sustainable recycled modular building solution from Foremans Relocatable Building Systems to expand its classroom facilities.

As an Academy, Cuckoo Hall in the London Borough of Enfield is independent from the local authority and directly accountable to the Department for Education. It has been recognised twice by Ofsted as outstanding, with achievements well in excess of national standards.

The school is managed by Cuckoo Hall Academies Trust, which in response to the high demand for places, has opened a new sister primary school, Woodpecker Hall Primary Academy, under the Government's free schools programme. In order to accommodate the new school's reception and nursery classes until its own building is completed on an adjacent site, Foremans has provided additional teaching facilities at Cuckoo Hall.

Simon Ward, Business Director at Cuckoo Hall Academy said: "The new buildings have given us a highly cost-effective interim solution which certainly doesn't look like a temporary facility. The finished classrooms have surpassed all our expectations, delivered excellent value for money and are just what we were looking to achieve."

Foremans has supplied 10 recycled steel-framed modules at Cuckoo Hall which have been configured as two adjacent teaching blocks to accommodate 120 children in three classrooms and one shared teaching space. The buildings, which are being hired from Foremans for an initial 12 months, are constructed to permanent standards and feature a decked area, timber cladding and a covered walkway to the main school.

Foremans completed the project in just nine weeks from receipt of order, helping to address the place planning issues in this London borough, and undertook all foundations, services, decking, steps and ramps, fitting out and cladding installation.

Commenting on the project, Mike Williams, Managing Director of Foremans, said, "This project successfully demonstrates how we can deliver affordable, flexible teaching accommodation in less time to help schools address serious place planning issues."

All Foremans' recycled modular buildings are fully refurbished to create high quality accommodation for a wide variety of interim and permanent education applications.
